Big Oh Analysis:

The time complexity of this maze generally increases as the openness level decreases which is because a maze with a higher openness level is more likely to have fewer dead-ends and more loops which also means that there are more possible paths to explore which would make the solution longer to find. A maze with lower openness would be more likely to have more dead-ends which would lead to less paths to explore meaning there would be less solutions, causing the time complexity to be very low.
